# Views

# Conventions

# Resolving a View

```
@RequestMapping(value = "/greeting")  
public String sayHello(Model model) {  
    model.addAttribute("greeting", "Hello World");  
    return "hello.jsp";  
}
```

```
@Bean  
public InternalResourceViewResolver getInternalResourceViewResolver() {  
    InternalResourceViewResolver resolver = new InternalResourceViewResolver();  
    resolver.setPrefix("/WEB-INF/jsp/");  
    resolver.setSuffix(".jsp");  
    return resolver;  
}
```

# Application

- Creating an Event

- EventController
- Event class
- event.jsp

# Summary

- Convention over Configuration
- InternalResourceViewResolver Java Configuration
- Modified HelloController
- Created new:
  - Event
  - Event Controller
  - event.jsp
- Next - > Building Out
